

NAHOM ASRAT BEGASHAW

Full-Stack Product Engineer — React · Next.js · TypeScript · Supabase · Postgres

Addis Ababa, Ethiopia (UTC+3) · nahomcookies@gmail.com · github.com/PethioPan · linkedin.com/in/nahomasrat · nahomasrat.com

Remote-ready: full overlap with European working hours, 4+ hours of daily overlap with US Eastern mornings.

SUMMARY

Full-stack engineer who owns products end to end — schema, auth, UI, deployment, and the support burden afterwards. Sole technical owner across two companies: eight products in production, including a multi-tenant SaaS with paying customers and a direct payment-gateway integration built without an aggregator. Also responsible for the infrastructure those products run on, for 100+ staff across three branches, which means shipping has always been constrained by having to keep everything else running at the same time.

SELECTED WORK

Multi-tenant menu platform — Next.js 16, React 19, TypeScript, Supabase (Postgres + RLS, Auth, Storage), Tailwind CSS v4, Playwright

Tenant-isolated SaaS for cafés: per-tenant theming and feature toggles, drag-to-reorder menu editing, image upload with optimization, live publishing, static export, super-admin panel with per-tenant health, weekly email digest. First paying customer live. 97 commits.

Digital loyalty platform — two installable PWAs on a shared Supabase backend, Playwright, Supabase Edge Functions

Customer app: passwordless email sign-in and Google OAuth, stamp cards per promotion, rewards and milestone history, referral flow crediting both parties, annual birthday reward, subscription vouchers, in-app push banners. Staff app: role-separated admin and super-admin, member lookup, stamp issuing with double-stamp days, reward redemption, NFC tap approval, program configuration, staff account management. Numbered SQL migrations, seeded environments, Playwright specs. 30 commits.

telebirr payment integration — TypeScript, zero runtime dependencies, monorepo with a Next.js sandbox

Direct client for Ethio Telecom's Fabric payment gateway, built to skip aggregators and their per-transaction cut. RSA request signing, token lifecycle, TLS reachability diagnostics, and a mock gateway mode so the full checkout flow runs without live credentials. 83 tests, all offline.

renaissancestones.com — Astro, custom Node content-ops tooling, PostHog

Full rebuild of a manufacturing company's site: PageSpeed Insights performance from roughly 45–50 to 100 on both desktop and mobile, redesigned throughout, broken forms and links repaired, mosaic product gallery, analytics with custom dashboards. Built a content pipeline around it — catalog validation, an image optimization stage, QR link generation, and a repository audit script wired into a single pre-baseline command. 125 commits over two years.

PaperTrail — Next.js, Drizzle ORM, PostgreSQL, Docker

Order-tracking system for a commodities trading firm, currently in pilot with the customer's own orders running through it.

Shopify storefront and app extensions — Liquid theme, Preact, App Bridge, Direct API

Custom coffee storefront theme maintained against Shopify platform releases, plus customer-account UI extensions calling the Admin API directly from the browser with no backend. 96 commits combined.

EXPERIENCE

IT Manager, and de-facto Software Engineer — Renaissance Stones / YeGesha Coffee

Addis Ababa, Ethiopia · November 2023 – Present

Hired to run IT operations; the role grew to include building and maintaining every piece of software both companies use. Both jobs, one person.

- Designed, built, and now maintain eight production applications covering e-commerce, payments, loyalty, menus, marketing sites, and internal tooling — one engineer, from schema to deploy to on-call.
- Took the corporate site from roughly 45–50 to 100 PageSpeed on desktop and mobile, and built the content-ops tooling that keeps it there as non-technical staff add products.
- Integrated a national payment gateway directly rather than through an aggregator, removing a recurring per-transaction fee from every future online sale.
- Own uptime for ERP, VPN, on-premises and cloud servers, CCTV, attendance, vehicle GPS tracking, telephony, POS, and internet across three branches serving 100+ employees.

- Led the migration of ERP hosting from international servers to locally managed infrastructure, cutting recurring foreign-currency cost and shortening vendor response times.
- Replaced direct-IP ERP login with secure domain-based access, improving both security posture and remote usability.
- Ran procurement and deployment for a new café branch end to end — POS, tablets, workstations, UPS, network — with the branch operational at launch.
- Built an FFmpeg-based media compression workflow that cut asset sizes 60–80% and removed a bottleneck from the marketing publishing cycle.
- Sole point of escalation to ISP, ERP vendor, and hardware suppliers; primary technical contact for every department head.
- Delivered in-person security awareness and device-handling training, and wrote IT policy and SOPs aligned to ISO 9001:2015.

React & React Native Developer — ShipShap

Remote · May 2020 – November 2022

- Built responsive interface components and application features in React and React Native for a shipping platform serving creators and small businesses.
- Worked cross-functionally with product and design across a distributed team.

Co-Founder & Developer — MBAN Developers

Addis Ababa, Ethiopia · October 2020 – October 2024

Co-founded a four-person development collective and led client-facing technical discussions and project coordination. Client engagements came as focused bursts of a few months rather than a continuous allocation, so the collective stayed active between projects rather than running continuously.

Client engagements

G&Y Engineering Consult · Addis Ababa · November 2022 – October 2023

Two phases across the engagement: the corporate website first, then a Strapi-backed blog platform with role-based publishing (separate editor and publisher permissions).

- Website phase ran about four months; the blog phase, the final two months.
- Configured web-hosted email in place of a paid SaaS subscription, cutting a recurring cost.
- Provided technical consultation to internal users on email and site administration.

Logiskills · Addis Ababa · September 2020 – January 2021

- Contributed front-end components and UI work to the company website.

TECHNICAL SKILLS

Languages TypeScript, JavaScript, SQL, HTML, CSS

Frontend React 19, Next.js 16 (App Router), Astro, React Native, Tailwind CSS v4, PWAs

Backend & data Node.js, PostgreSQL, Supabase (Auth, Row Level Security, Storage, Edge Functions), Drizzle ORM, Strapi

Payments & commerce Ethio Telecom Fabric gateway (direct integration), Shopify Liquid themes, Shopify App Bridge and Admin API extensions

Testing & quality Playwright, unit testing, ESLint, Prettier, pre-commit hooks, CI-style baseline scripts

Infrastructure & ops Linux, Docker, Vercel, networking and VPN, Windows Server, ERP administration, remote access (RDP, AnyDesk), POS systems

Other Git, PostHog analytics, FFmpeg pipelines, AI-assisted development tooling

EDUCATION & CERTIFICATIONS

BSc Computer Science — HiLCoE School of Computer Science, Addis Ababa, 2024

- ISO 9001:2015 — Quality Management System Development & Implementation
- ISO 19011:2018 — Management System Auditing
- freeCodeCamp — JavaScript Algorithms & Data Structures; Responsive Web Design (~600 hours)
